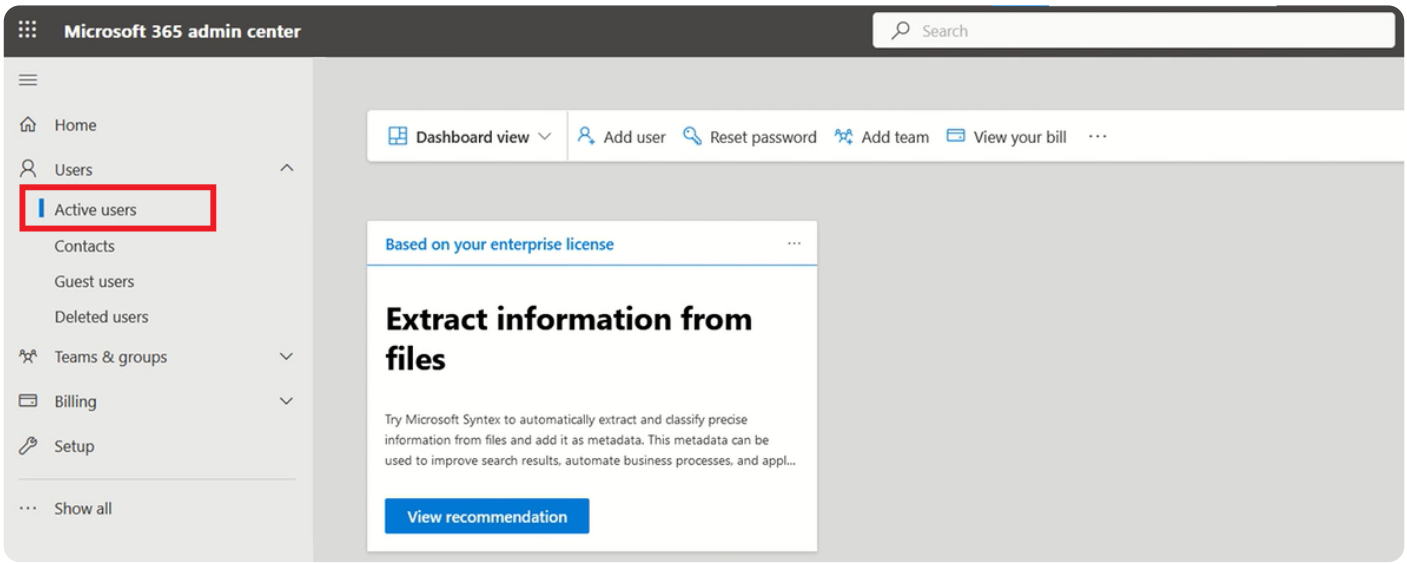
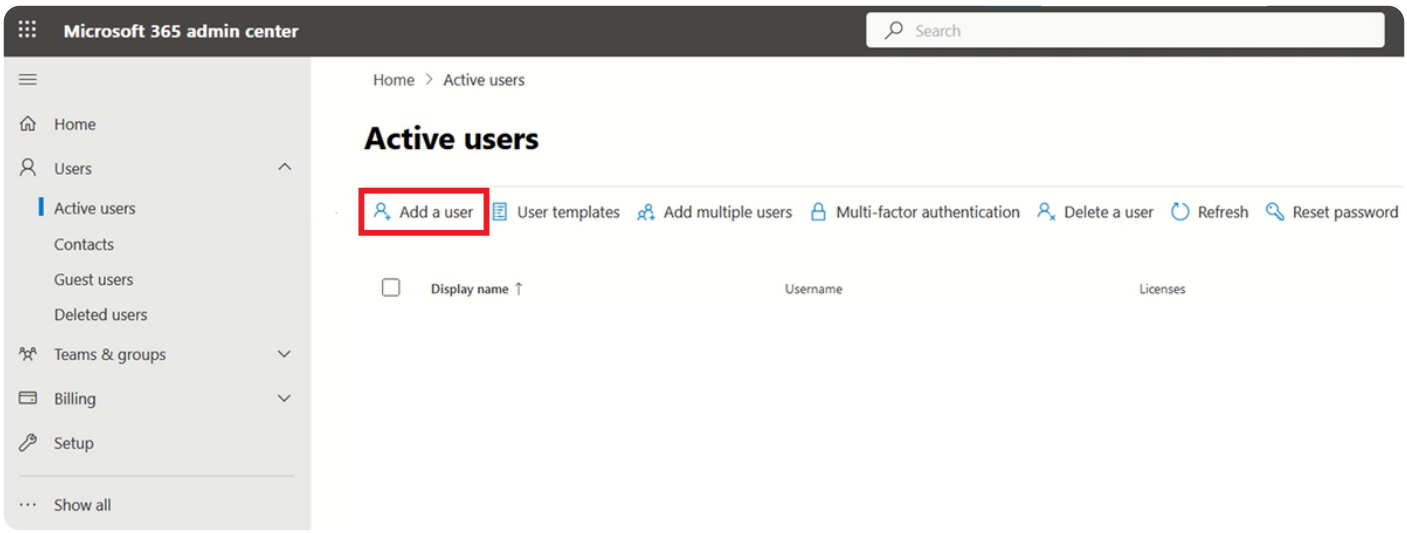
Creating a user for integration with the telephony network

To integrate a tenant with the T-Mobile network, you need to create a user and assign them a license with the Teams Phone add-on. After the integration work is complete, this user can be deleted. This will allow you to recover the license.

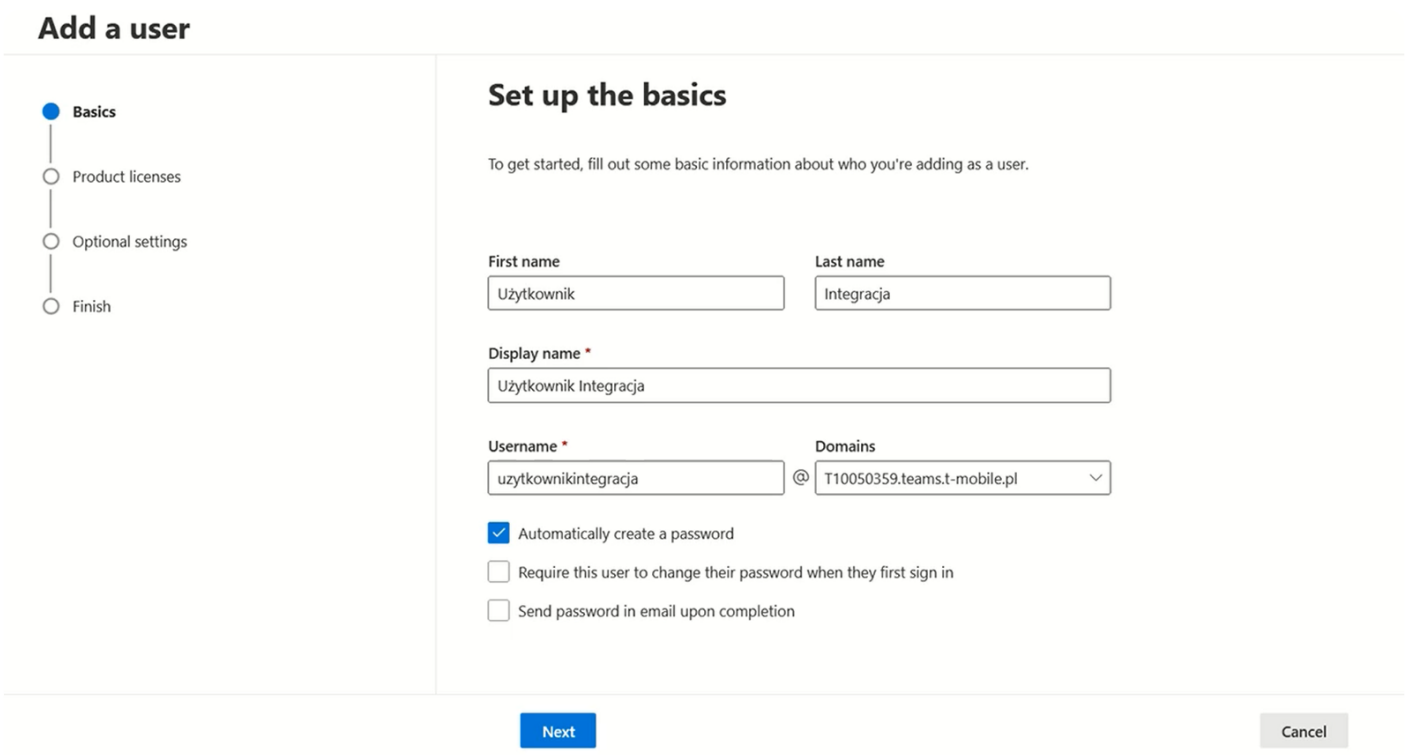
1. From the menu on the left, select **Users** > **Active Users**.



2. Select **Add a user**.



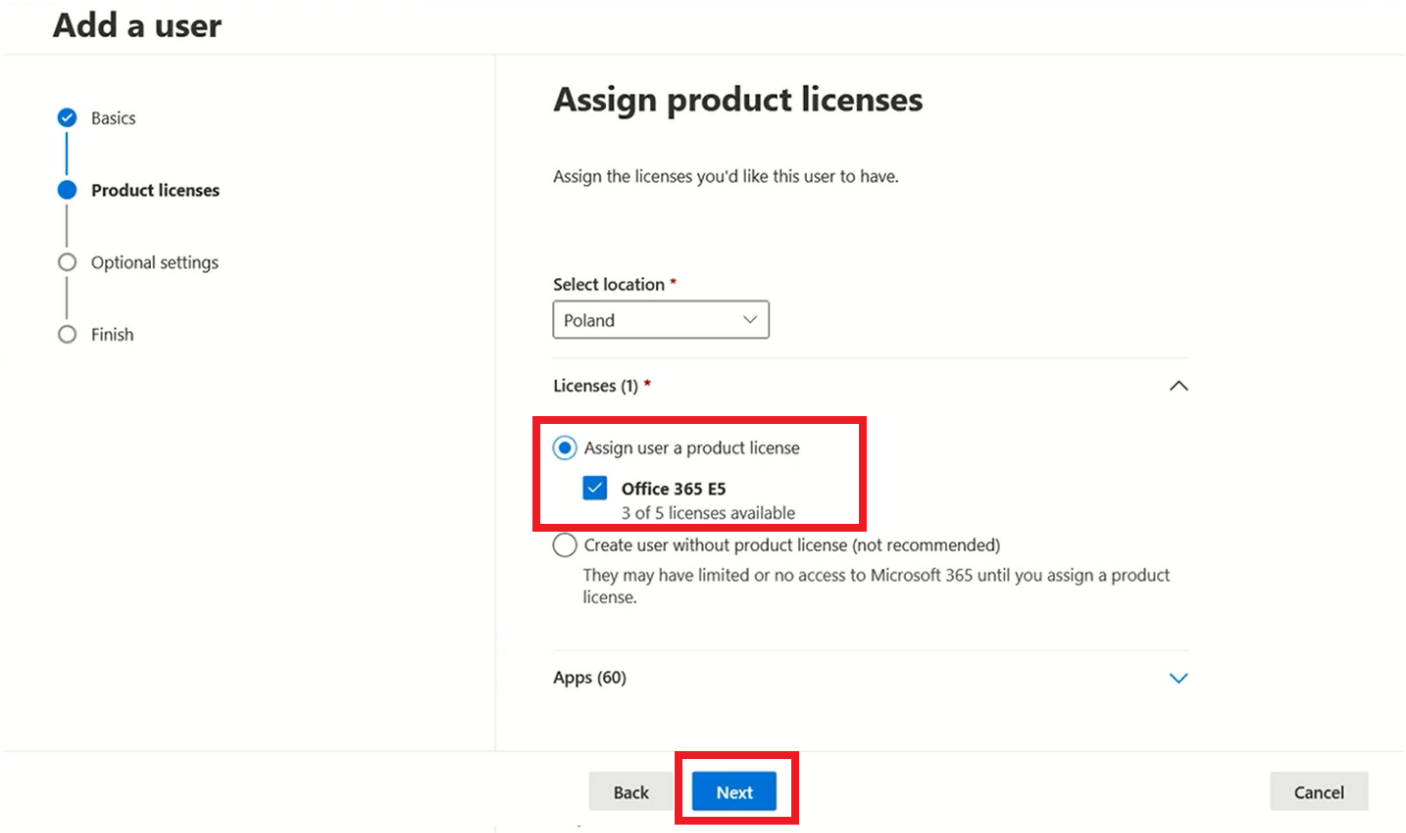
3. Fill in the user's information and select the password settings. Enter the domain that was assigned to your company by T-Mobile, for example: **T10012345.teams.t-mobile.pl**.



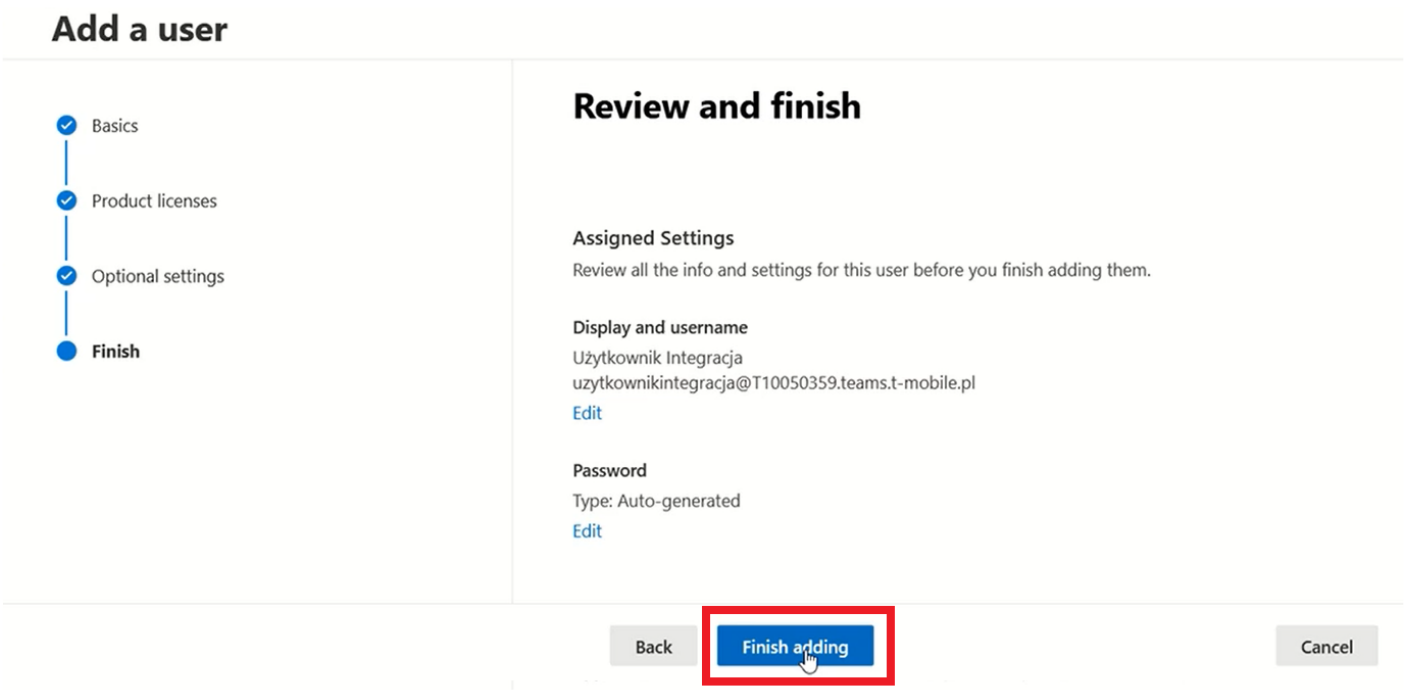
4. Assign the user a license that includes **Microsoft Teams.** For example:

- Microsoft 365 E5,
- M365 Business Basic,

- M365 Business Standard.



5. Follow the next steps until the user creation is complete.



Once you have finished adding the user, you can proceed to the next instruction.
